J. Biol. Chem. 269, 28929-28936, 1994
A; Title: Primary structure and binding properties of calgranulin C, a novel S100-like ca
A; Reference number: A55406
A; Ratus: preliminary
A; Rocession: A55406
A; Returence preliminary
A; Molecule type: protein
A; Residues: 1-91 < DEL>
A; Corss-references: UNIRROT: P80310
C; Superfamily: S-100 protein; calmodulin repeat homology
C; Reywords: calcum binding: Er hand
F; 48-80/Domain: calmodulin repeat homology < EF2>
                                                                         A;Status: preliminary
A;Molecule type: protein
A;Residues: 2-1 GGUIZ-
C;Comment: This protein is released by activated neutrophils in the course of inflammato C;Cenetics:

A; Introns: 50/3
A;Note: the first intron occurs before the initiator codon
A;Note: the first intron occurs before the initiator codon
C;Complex: heterodimer and higher complexes with calgranulin A (see PIR:BCHUCF)
C;Superfamily: S-100 protein; calmodulin repeat homology
C;Keywords: blocked amino end; calcium binding; BF hand; heterodimer; inflammation; pho:
F;2-114/Product: calgranulin B #status experimental <MAT>
F;2-144/Domain: calmodulin repeat homology <BF1>
F;54-86/Domain: calmodulin repeat homology <BF2>
F;2/Modified site: blocked amino end (Thr) (in mature form) (probably acetylated) #status
F;113/Binding site: phosphate (Thr) (covalent) #status predicted

A,Molecule type: protein
A;Residues: 56-61,'N', 63-79,'V' <OKA>
C;Comment: The S-100 protein is composed of two related polypeptide chains, alpha and b: C;Comment: The S-100 protein is composed of two related polypeptide chains, alpha and b: C;Comment: S-100 is also found in a variety of other tissues.
C;Comment: S-100 is an intracellular protein that weakly binds calcium. It binds zinc v: es with different affinities exist for both ions on each monomer. Physiological concent:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A,Title: The amino-acid sequence of S-100 protein (PAP-I-b protein) and its relation to A,Reference number: A91254; MUID:79045265; PMID:710399
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A; Molecule type: protein

JN0686

Calgranulin B - rat

N,Alternate names: calcium-binding protein MRP-14; macrophage migration inhibitory facto
C;Species: Rattus norvegicus (Norway rat)
C;Species: Rattus norvegicus
C;Accession: JN064
C;Accession: JN064
R;Imamichi, T.; Uchida, I.; Wahl, S.M.; McCartney-Francis, N.
Biochem. Biophys. Res. Commun. 194, 819-825, 1993
A;Title: Expression and cloning of migration inhibitory factor-related protein (MRP)8 an A;Reference number: JN0685; MUID:93343942; PMID:8343166

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cytoskeleton.
--- TISSUB SPECIFICITY: Found essentially in phagocytic cells.
--- PTM: Physphorylated by protein kinase C.
---- SIMILARITY: Belongs to the S-100 family.
--- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      122

In vitro antimicrobial activity of the human neutrophil cytosolic S-
100 protein complex, calprotectin, against Capnocytophaga sputigena.";
J. Dent. Res. 72:517-523 (1993).
-!- FUNCTION: Expressed by macrophages in acutely inflammated tissues and in chronic inflammations. Seem to be an inhibitor of protein kinases. Also expressed in epithelial cells constitutively or induced during dermatoses. May interact with components of the intermediate filaments in monocytes and epithelial cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Probom; PD003407; CaBP_S100; 1.

                                                                                                                                                                                                                            -!- MISCELLANEOUS: Has been shown to bind calcium.
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           MIM; 123886; --

Mol. Biol. 325:785-794(2003).
-!- SUBUNIT: Homodimer. Interacts with S100Z.
-!- MISCELLANEOUS: This protein binds two calcium ions.
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Proc. This sequence represents the CAAF1 calcium-binding protein isolated from human amniotic fluid. CAAF1 belongs to the $100 protein family, which includes calcyclin, WRB94, and WRP14. Intracellular calcium ion concentration is one of the key factors for intracellular signal transduction. The calcium signals are transduced by various calciumbinding proteins, such as this protein. CAAF1 is normally expressed in epithelial cells are negative for CAAF1 is normally expressed in several types of cancer cells and neutrophils and overexpression is observed in several types of cancer cells and neutrophils/macrophages infiltrating cancerous lesions. Detection of CAAF1 (using antibodies in usual immunoassays) can be used to diagnose (or monitor) inflammation, neoplasia (particularly squamous cell carcinoma of the skin, oesophagus, lung and cervix), and skin and blood diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

```
This is a human chemotactic cytokine I polypeptide. The encoding polynucleotide, along with a vector and a host cell can be used for the recombinant production of the chemotactic cytokine. Cytokine agonists and antagonists can be used for the treatment of a patient requiring a chemotactic cytokine I and for the treatment of a patient requiring the inhibition of a chemotactic cytokine I polypeptide, respectively. The chemotactic cytokine is used to treat tumours, chronic infection, leukaemia and T-cell mediated autoimmune diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CITGCAAACACCATCAAGAATATCAAAGATAAAGCTGTCATTGATGAAATATTCCAAGGC 180

This invention describes a novel composition for treating primary or secondary cardiomyopathy or cardiac insufficiency contains at least one secondary cardiomyopathy or cardiac insufficiency contains at least one 100 protein (I) or uncleic acid (II) encoding (II), or their mutants or fragments, or a gene transfer vector containing (II), optionally proteins involved in calcium homeostasis, so their overszpression in cardiac muscle will improve pumping capacity (and overall capacity) of the heart. In cultured myocardial cells they increase the contraction and release complete acid myocardial cells they increase the contraction and release contraction facts associated with increased systolic calcium ion release consect to treat cardiomyopathy (CMP) where inherited or caused by spontaneous mutations and ischemic CMP caused by atteriosclerosis, and structural disease caused by pulmonary and/or arterial hypertension, and structural disease caused by thythm disorders or valve defects, generally any condition associated with reduced contractile force. Unlike calmodulin, which is expressed ubdulticusly, (I) show tissue-specific expression and treat the caused cardiac contractile force. Unlike calculum (SR) that causes cardiac
                                                                                                                                                                                                                                                                                                              Composition containing $100 protein, corresponding nucleic acid or vector, useful for treating cardiomyopathy and cardiac insufficiency.
                                                                                                                                                                                                                                                                                                                                                                               Claim 35; Page 20; 36pp; German.

Detecting, preventing and treating degenerative, neurological and autoimmune diseases, particularly multiple sclerosis, using specified polypeptides or related nucleic acid or ligand.

Claim 1; Page 168; 209pp; French

The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypeptide or polymorleotide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GMZ activator, calgranulin B or saposin B protein familiss. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polymucleotides and polypeptides are used for diagnosis, prognosis, proprecition and treatment of multiple sclerosis (in its various forms and parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid polyarthritis and lupus erythematosus, including use as vaccines and in gene therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypoptide or polymolectide sequence belonging to the perfecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GM2 activator, calgranulin B or saposin B protein families. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polymolectides and polypeptides are used for diagnosis, prognosis, prevention and treatment of multiple sclerosis (in its various forms and parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid polyarthritis and lupus erythematosus, including use as vaccines and in polyarthritis and lupus erythematosus, including use as vaccines and in gene therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells

```
The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypeptide or polynucleotide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the retinol-binding plasma protein, precursor of the ganglioside GM2 activator, calgranulin B or saposin B protein families. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polynucleotides and polypeptides are used for disquosis, prognosis, proevention and treatment of multiple sclerosis (in its various forms and phases). They may also be useful in cases of e.g. Alzheimer's and Parkinson's diseases, amyotrophic lateral sclerosis, rheumatoid

The present invention describes a method for diagnosing inflammatory diseases, which comprises determining the amount and/or concentration of calgranulin C polypeptide and/or nucleic acids encoding the polypeptide present in the biological sample. Also described are methods for treating present in the biological sample. Also described are methods for treating or preventing an inflammatory disease in a mammal, and medical treatment of the treated or prevented. Calgranulin C has antiinflammatory activity and can be used in gene therapy. The method is useful for diagnosing, treating or preventing inflammatory disease, .g. vasculitis, controlarly Kawasaki disease), cytic fibrosis, chronic inflammatory attritis (e.g. psoriatic arthritis, rheumatorid arthritis or seronegative arthritis (e.g. psoriatic arthritis, rheumatorid arthritis or seronegative arthritis), systemic onset juvenile rheumatorid arthritis or chronic inflammatory an acquired infection on the background of an inflammatory disease, or an exacerbation of an already present disease. The method is also useful for diagnosing specific stages of inflammatory diseases, for determining the risk of relapse, and for discriminating between diseases with similar symptoms. The present sequence represents human calgranulin C, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        120

                                                                                                                                                                                                           The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polypeptides of the invention.

Novel PRO polypeptide e.g., PRO69614, PRO71106, or PRO86388 useful for treating an immune related disorder such as systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis or CGGAAGGGGCATTTTGACACCCTCTCTAAGGGTGAGCTGAAGCAGCTGCTTACAAAGGAG 120 Human; PRO; immune related disorder; systemic lupus erythematosus; rheumatoid arthritis; osteoarthritis; juvenile chronic arthritis; systemic sclerosis; Sjogren's syndrome; vasculitis; sarcoidosis; autoimmune haemolytic anaemia; autoimmune thrombocytopenia; thyroiditis; diabetes mellitus; renal disease; demyelinating disease; central nervous system; peripheral nervous system; demyelinating polyneuropathy; duillain-Barre syndrome; chronic inflammatory demyelinating polyneuropathy. 9 20 The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid schritis, osteoarthritis, juvenile chronic arthritis, systemic aclerosis, systemic chronic arthritis, systemic haemolytic anemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central to r peripheral nervous system, demyelinating polymeuropathy, guillain-Barre syndrome and chronic inflammatory demyelinating polymeuropathy, polymeuropathy. This sequence represents a human PRO polypeptide of the ATGACAAAACTTGAAGAGCATCTGGAGGGAATTGTCAATATCTTCCACCAATACTCAGTT Williams PM; Schoenfeld J, 00000 Length:

This invention relates to the novel association of protein sequences (and the genes which encode them) to the NP-kappaB pathway. The invention may be useful for the production of compounds with an antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antiinflammatory, cytostatic, hepatotropic, virucide, antiarthritic, antiinflammatory, cytostatic, inmunosuppressive or immunomodulator, cerebroprotective, vasocropic, immunosuppressive or vulnerary activity or for gene therapy. The proteins and nucleotides are useful for diagnosing, preventing, treating, or ameliorating conditions or diseases associated with the NP-kappaB pathway. The condition is an immune disorder, an inflammatory disorder, an inflammatory disorder, an inflammatory disorder related to aberrant NP-kappaB regulation, cancer, aberrant apoptosis, hepatic disorders, Hodgkin's lymphomas, haematopoietic tumours, hyper-IgM cydromes, hypohidrotic ectodermal dysplasia, xlinked anhidrotic ectodermal dysplasia, immunodeficiency, viral infections, HIV-1, HTLV-1, hepatitis B, hepatitis C, EBV, influenza, viral replication, host cell
                                                                                                                                                                                                                                                                                                                                                 NP-kappaB pathway; antiinflammatory; cytostatic; hepatotropic; virucide; antiarthritic; antirheumatic; gastrointestinal-Gen; antiasthmatic; antiarteriosclerotic; immunomodulator; cerebroprotective; vasotropic; immunosuppressive; vulnerary; gene therapy; immune disorder; inflammatory disorder; NP-kappaB regulation; cancer; aberrant apoptosis; hepatic disorder; Hodgkin's lymphoma; haematopoietic tumour; hyper-Ign syndirotic ectodermal dysplasia; whyper-Ign spohidrotic ectodermal dysplasia; viral infection; HIV-1; HTLV-1; hepatitis B; hepatitis C; EBV; influenza; viral replication; host cell survival; evasion of immune response;

The invention relates to a movel isolated nuclear and the front collypeptide encoded by it. A protein of the invention has antialized to antialized contropathic, antializatic, and propertice of the invention may have use in gene therapy. The PRO polypeptide, its agonist, or antibody that specifically binds to the collypeptide is useful for treating an immune related disorder such as systemic arthritis, a spondyloarchropathy, systemic sclerosis, and inflammatory myopathy, Sjogran's syndrome, systemic claimating disease, anticimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating polymeuropathy, a hepatobiliary a chronic inflammatory demyelinating polymeuropathy, an hepatobiliary disease, inflammatory demyelinating polymeuropathy, an hepatobiliary clirhosis, granulomatous hepatitis, sclerosing cholangitis, inflammatory bowel disease, gluten-sensitive enteropathy, Whipple's disease, arthosis, autoimmune or immune-mediated skin disease, a bullous skin disease, asthma, allergic rhinitis, atopic dermatitis, food theresonsitivity, urricaria, an immunologic disease, graft rejection or cosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pretein companies. The present sequence represents a PRO protein
                                                                                              New PRO polypeptides and polynucleotides, useful for treating e.g. erythematosus, rheumatoid arthritis, diabetes mellitus, immune-mediated renal disease, or demyelinating diseases of the central or peripheral
                                                                                                                                                                                                                                                                                    invention relates to a novel isolated nucleic acid and the PRO

New nucleic acid encoding PRO polypeptide, useful for diagnosing and treating psoriasis, Crohn's disease, Ulcerative Colitis, or rheumatoid arthritis. N-PSDB; ADS74330

WPI; 2004-668955/65.

Claim 9; SEQ ID NO 50; 166pp; English.

The present sequence is the protein sequence of novel human PRO polypeptide PR062943. The invention provides newly identified and isolated nucleotide sequences encoding polypeptides referred to as PRO polypeptides that are useful in the diagnosis and treatment of immunece polypeptides that are useful in the diagnosis and treatment of immunece related diseases. Microarray analysis showed that expression of PR062943 crelated diseases microarray analysis showed that expression of PR062943 crelated diseases patients and up-regulated 2-fold in white blood cells from rheumatoid arthritis patients as compared to those from healthy donors. The managulated 2-fold upon activation of CD4 T cells with CD28 or ICAM, down-regulated 6-fold upon differentiation of monocytes into macrophages after 7 days in differentiation media and up-regulated 4-fold upon activation of monocytes with LPS. PR062943 can be used in a claimed compand of identifying a compound that inhibits expression of the gene encoding it. The candidate compound is especially an antisense nucleic acid. The PRO polypeptide can be obtained by recombinant expression, contained analyzation of an antisonist or an antisposity that binds the polypeptide are used in a companial mathods for the antibody that binds the polypeptide are used in a companial mathon of an antisposity or claimed methods for the alleviation or diagnosis of rheumatoid arthritis and psoriasis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a human protein, which is used in the method of the invention. The specification describes a method which uses at least one polypeptide or polymorleotide sequence belonging to the perlecan, precursor of the retinol-binding plasma protein, precursor of the ganglioside GM2 activator, calgranulin B or saposin B protein families. The method is used for detecting, preventing or treating a degenerative, neurological and/or auto-immune disease. The polymucleotides and polypeptides are used for diagnosis, prognosis, polymucleotides and polypeptides are used for diagnosis, prognosis, prevention and treatment of multiple sclerosis (in its various forms and passes). They may also be useful in cases of e.g. Alzheimer's and polypertophic lateral sclerosis, rheumatoid polyarthritis and lupus erythematosus, including use as vaccines and in polyarthritis and lupus erythematosus, including use as vaccines and in gene therapy (expression of sense or antisense sequences). They can also be used to assess efficacy of potential therapeutic agents, particularly compounds that reduce or inhibit toxicity towards glial cells

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping,

and in recombinant production of (II). The polynucleotides are also used
in diagnostics as expressed sequence tags for identifying expressed
genes. (I) is useful in gene therapy techniques to restore normal
activity of (II) or to treat disease states involving (II). (II) is
cactivity of (II) or to treat disease states involving (II). (II) is
cusful for generating antibodies against it, detecting or quantitating a
polypeptide in tissue, as molecular weight markers and as a food
supplement. (II) and its binding partners are useful in medical imaging
of supplement. (II) and its binding partners are useful for treating disorders
involving abscrant protein expression or biological activity. The
polypeptide and polynucleotide sequences have applications in
diagnostics, foremaics, gene mapping, identification of mutations
cresponsible for genetic disorders or other traits to assess biodiversity
camino acid sequences. Abgonolo-Abg30377 represent novel human diagnostic
amino acid sequences of the invention. Note: The sequence data for this
patent did not appear in the printed specification, but was obtained in
cletronic format directly from WIPO at
creaponing the printed specification, but was obtained in
clettonic format directly from WIPO at

```
A novel bioactive metal RNA polypeptide (RNP) has a RNA component including the sequence AAT62568 and a polypeptide component having the sequence AAM01826, which is encoded by AAT62569. The RNP, or anti-RNP immunoglobulins, can be used to modulate and/or analyse angiogenesis and the vascular state of mammalian tissue, transfer genetic information in cells and selectively alter the nucleic acid content of cells. Leukocytes from pig's blood were cultured in medium, and the supernatant treated with NH4 sulphate at 35, 45 and 90% saturation to precipitate protein fractions. The residual supernatant was diltued to 45% NH4 sulphate the abstraction and concentrated by ultrafiltration using a 0.5 kD membrane. The retenate was purified to give 8 mg of product described as monocytocurny.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             184 GATGCTAATCAAGATGAACAGGTCGACTTTCAAGAATTCATATCCTGGTAGCCATTGCG 243

Sequence 3, Application US/09826589

Patent No. US2002010672641

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Schmidt, Ann Marie
APPLICANT: Schmidt, Ann Marie
TITLE OF INVENTION: EXTRACELLULAR NOVEL RAGE BINDING PROTEIN (EN-RAGE) AND USES THERE
FILE REPERENCE: 0575/55873-B-PCT-US
CURRENT APPLICATION NUMBER: US/09/826,589

CURRENT FILING DATE: 2001-04-05

NUMBER OF SEQ ID NOS: 6

SOFTWARE: Patentin version 3.1

SEQ ID NO 3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 4, Application US/09826589;
Sequence 4, Application US/09826589;
Patent No. US20201067261.
GENERAL INFORMATION:
APPLICANT: Schmidt, Ann Marie
APPLICANT: Stern, David
TITLE OF INVENTION: EXTRACELULAR NOVEL RAGE BINDING PROTEIN (EN-RAGE) AND USES THERE
FILE REPERENCE: 0575/58973-B-PCT-US
CURRENT APPLICATION NUMBER: US/09/826,589
CURRENT APPLICATION NUMBER: US/09/826,589
CURRENT PILING DATE: 2001-04-05
NUMBER OF SEQ ID NOS: 6
SOFTWARE: Patentin version 3.1
SEQ ID NO 4
LENGTH: 90
TYPE: PRT
CRANISM: Bovine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            123
